# 463L Pallet Storage Systems

## *On Floor or Elevated Storage Systems for 463L Pallets*

463L Pallet Conveyors are designed specifically to handle the 463L pallets utilized by the Air Force and other air cargo carriers. The 463L pallet conveyor systems are much larger and heavier than a standard pallet conveyor and must be conveyed on an extremely heavy duty conveyor system. The dimensions of a 463L Pallet are 88" wide and 108" in length and they can weigh in excess of 10,000lbs.

463L pallet conveyor systems are often configured utilizing heavy duty conveyor rails, roller conveyor or ball transfer conveyor. In many cases a 463L pallet conveyor system will utilize two or more of these components. This air cargo conveyor system is typically used to store and transfer loaded 463L pallets in a facility or aircraft. A common 463L pallet system will allow the air cargo pallets to be manually pushed

into and out of the conveyor system.

The ball transfer conveyor is most often utilized in the system to move the 463L pallets into storage lanes comprised of conveyor rails or gravity roller conveyor. The gravity roller conveyor or conveyor rail lanes are often interfaced with forklifts so pallets may be added or removed from the conveyor system.
