Aviation Maintenance Platform

Above Wing Tool Storage and Maintenance Access

American Mezzanine Systems Aviation Maintenance Platforms are used worldwide by the US Armed Forces, commercial and private aircraft maintenance facilities. Traditionally aircraft mechanics must store tools and equipment on the hangar floor and haul each piece up and down ladders. More often than not this practice leads to injury and or workplace accidents.

Our aviation maintenance platforms allow mechanics to store and access all necessary tools and equipment above wing. With one of our systems in your maintenance hangar you will be able to eliminate the need to carry tools up and down ladders to work on the aircraft, thus greatly reducing the risk of injury. Access to the aircraft is made possible through a

powered drawbridge walkway that safely lowers above the wing.

This efficient and unique system is designed around our high quality structural steel mezzanine system. American Mezzanine Systems are not only the most robust design on the market they are also backed by our hassle free Lifetime Warranty.
